Great Gray Owl Trends across Canada, 1995−2024

127 Nocturnal Owl Survey routes with 1975 surveys and species observed during 25%
17 BBS routes with 295 surveys and species observed during 15%

Population trends from an integrated analysis of data from Nocturnal Owl Surveys and BBS using a spatially explicit model to estimate annual changes in counts within grid cells and eBird seasonal relative abundance in 2023 to weight local changes based on relative population size.

Great Gray Owl Trends across Canada, 2010−2024

127 Nocturnal Owl Survey routes with 1975 surveys and species observed during 25%
17 BBS routes with 295 surveys and species observed during 15%

Population trends from an integrated analysis of data from Nocturnal Owl Surveys and BBS using a spatially explicit model to estimate annual changes in counts within grid cells and eBird seasonal relative abundance in 2023 to weight local changes based on relative population size.

Great Gray Owl Survey routes contributing to trends

127 Nocturnal Owl Survey routes with 1975 surveys and species observed during 25%
17 BBS routes with 295 surveys and species observed during 15%

Population trends from an integrated analysis of data from Nocturnal Owl Surveys and BBS using a spatially explicit model to estimate annual changes in counts within grid cells and eBird seasonal relative abundance in 2023 to weight local changes based on relative population size.

Great Gray Owl Population trajectory for Canada

Population trajectory from an integrated analysis of data from Nocturnal Owl Surveys and BBS using a spatially explicit model to estimate annual changes in counts within grid cells and eBird seasonal relative abundance in 2023 to weight local changes based on relative population size.
