

# Northern Saw-whet Owl Trends across Canada, 1995–2024

759 Nocturnal Owl Survey routes with 10919 surveys and species observed during 45%  
5 BBS routes with 116 surveys and species observed during 9%

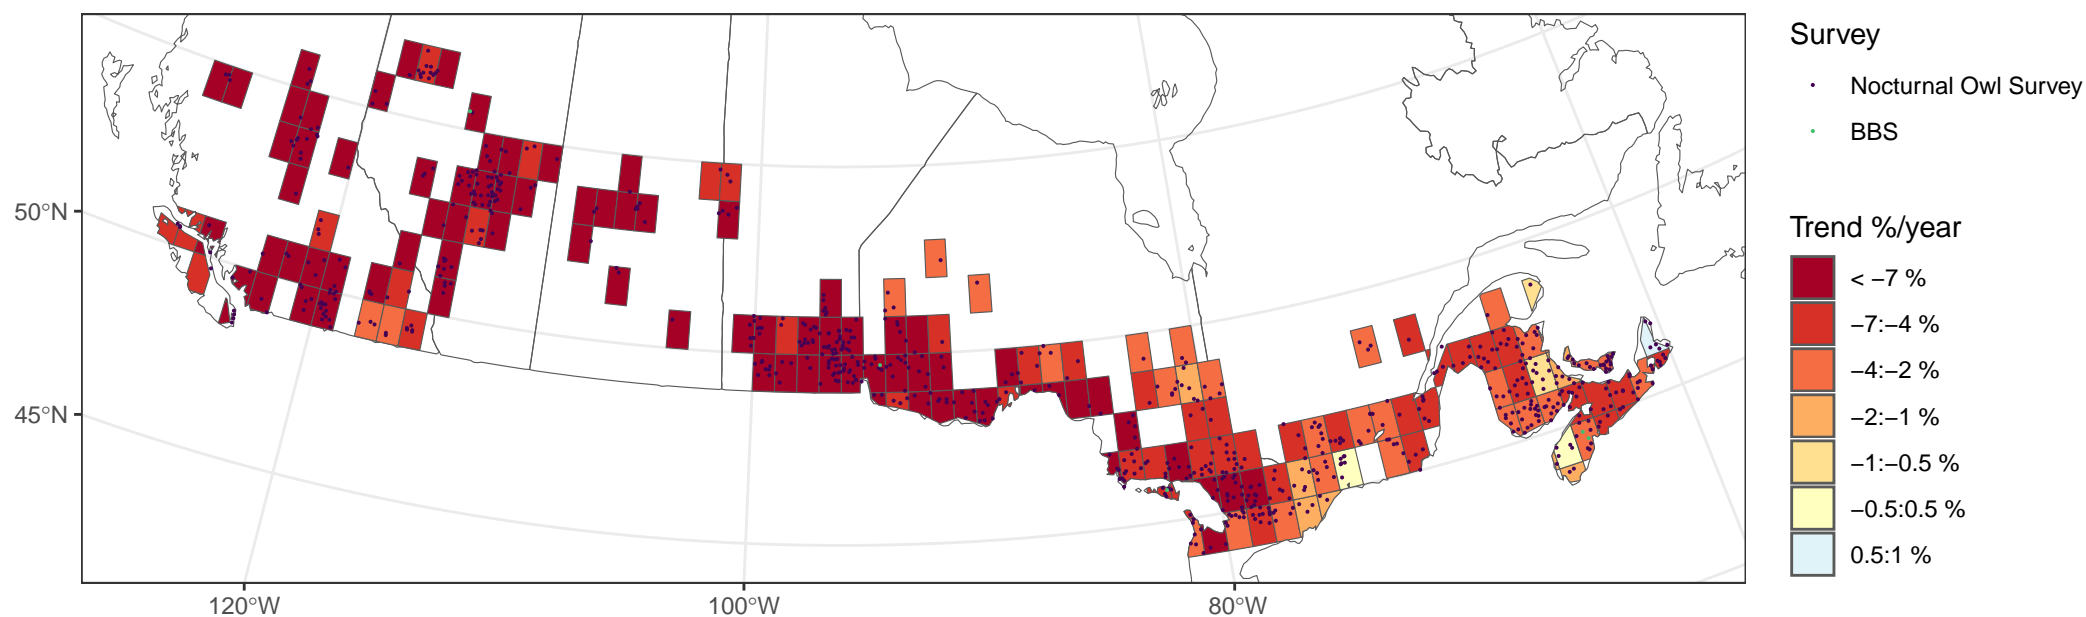

Population trends from an integrated analysis of data from Nocturnal Owl Surveys and BBS using a spatially explicit model to estimate annual changes in counts within grid cells and eBird seasonal relative abundance in 2023 to weight local changes based on relative population size.

## Northern Saw-whet Owl Trends across Canada, 2010–2024

759 Nocturnal Owl Survey routes with 10919 surveys and species observed during 45%

5 BBS routes with 116 surveys and species observed during 9%

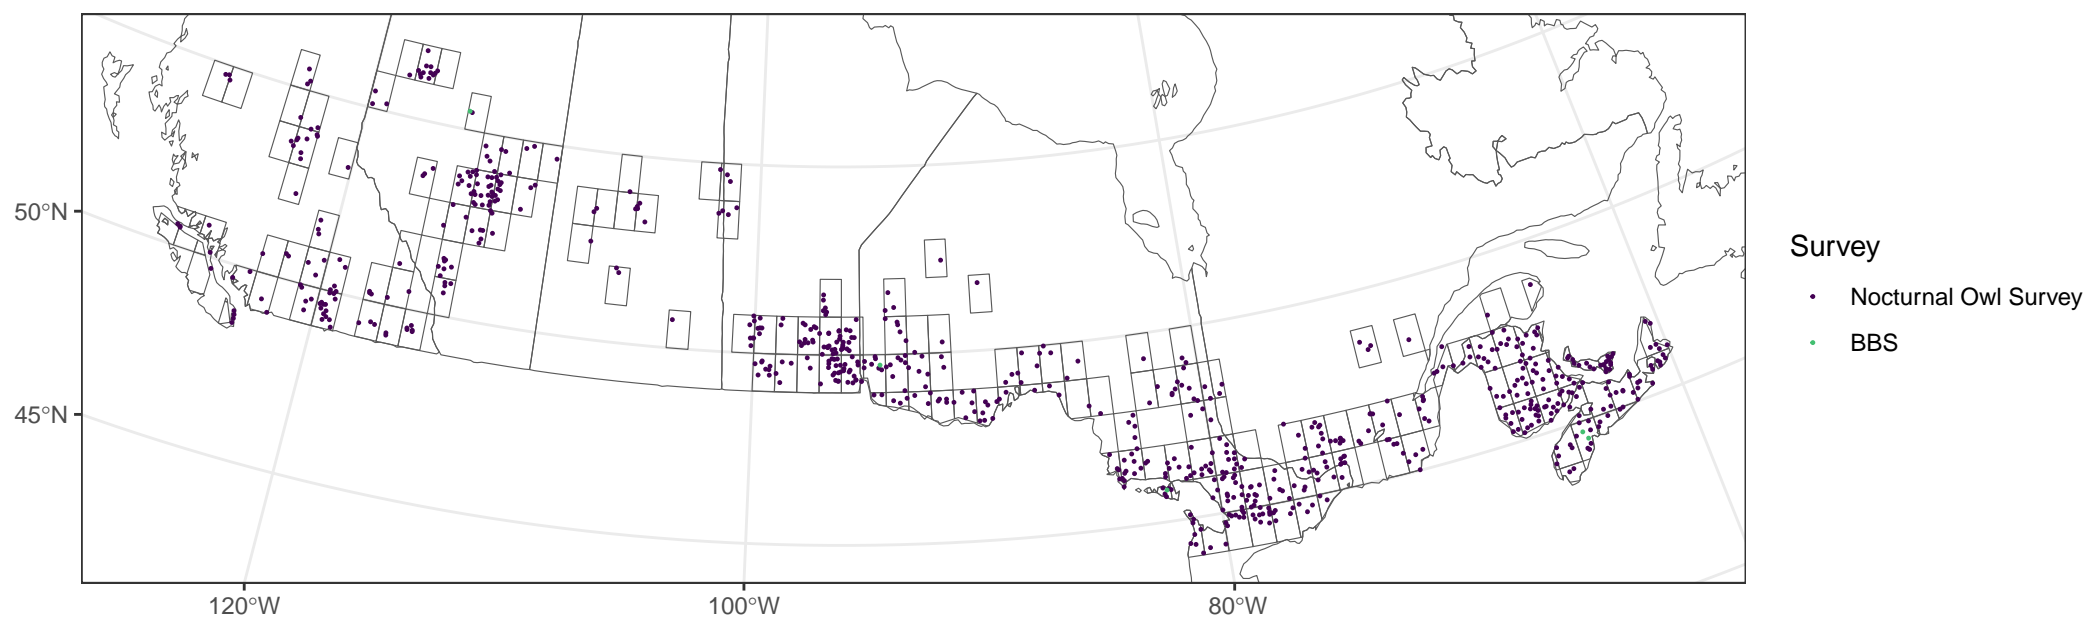

Population trends from an integrated analysis of data from Nocturnal Owl Surveys and BBS using a spatially explicit model to estimate annual changes in counts within grid cells and eBird seasonal relative abundance in 2023 to weight local changes based on relative population size.

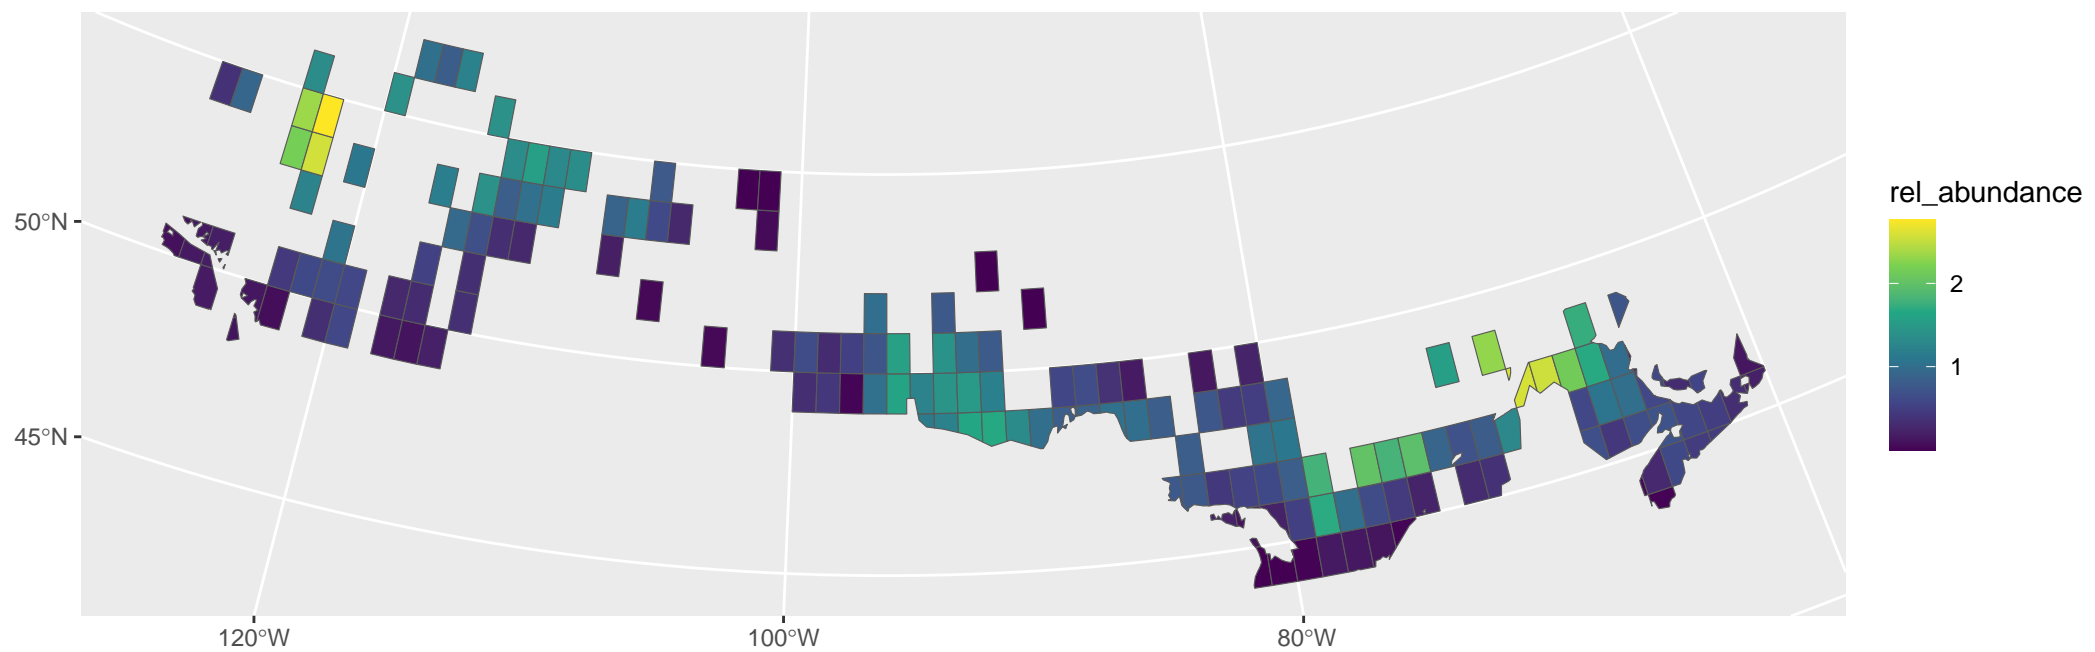

## Northern Saw-whet Owl Survey routes contributing to trends

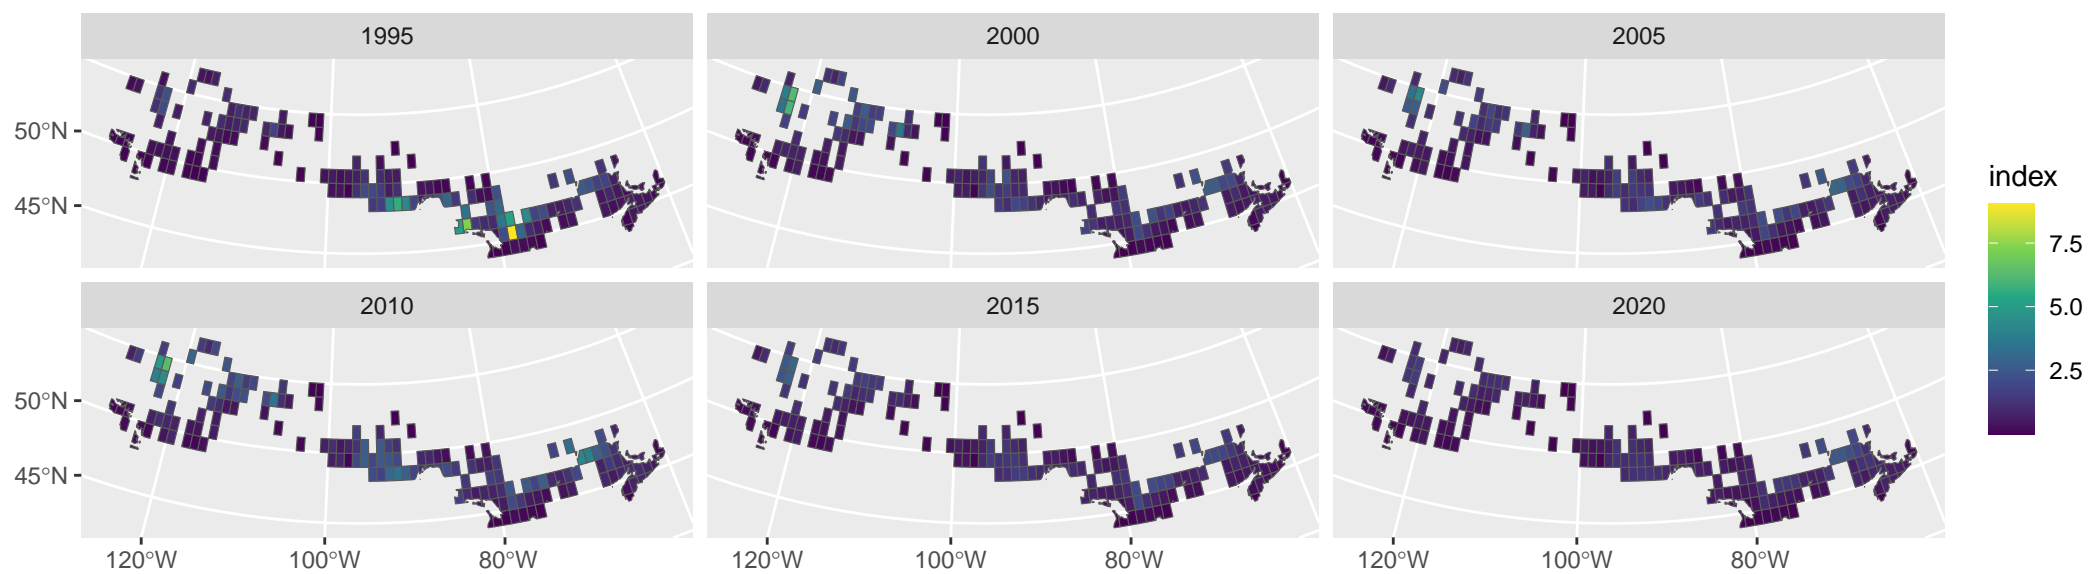

759 Nocturnal Owl Survey routes with 10919 surveys and species observed during 45%

5 BBS routes with 116 surveys and species observed during 9%

Population trends from an integrated analysis of data from Nocturnal Owl Surveys and BBS using a spatially explicit model to estimate annual changes in counts within grid cells and eBird seasonal relative abundance in 2023 to weight local changes based on relative population size.

# Northern Saw-whet Owl Population trajectory for Canada

Population trajectory from an integrated analysis of data from Nocturnal Owl Surveys and BBS using a spatially explicit model to estimate annual changes in counts within grid cells and eBird seasonal relative abundance in 2023 to weight local changes based on relative population size.
